INSPECT BEFORE IT IS COVERED — BECAUSE NOBODY WILL FIND IT LATER

WHY DO COVERED DEFECTS PASS?

The strongest point here, and the reason inspection happens during the work rather than only at the end.

> ✋ **If a defect is covered up, it will pass your inspection** — because you cannot see it. Then it will very likely pass the tests as well. And at that point nobody is going back.

If it has passed the testing you are going to leave it — and then you get called back later.

> `The time to catch it is before the lid goes on`
