LOCK-OFF DEVICES

DOES A LOCK-OFF STILL NEED A PADLOCK?

DEVICE	WHAT IT IS FOR
MCB lock-off with a grub screw	Clamps onto a breaker toggle
Spring / clip type	Locates into the small holes and grooves in the side of a breaker or main switch. The better pick — sturdier, and nothing to lose
Fuse carrier lock-off	Covers the fuse of a fused connection unit so it cannot be pushed back in
Multi-lock hasp	Where several people are working on the same system, each fits their own padlock
Large lock-offs	Big breakers and isolators

A combination device still gets a padlock.
The lock-off holds the switch; the padlock stops anyone removing the lock-off.
