TALK IT THROUGH OUT LOUD, AND MAKE IT A PRIORITY

CAN TEACHING YOURSELF OUT LOUD REALLY WORK?

TALK IT THROUGH OUT LOUD

We believe in pen and paper, and also in **talking to yourself**.

After years on the tools, theory you last looked at long ago can feel completely forgotten when you open it up again, and a day or two in it's easy to think about **quitting**. The best thing to do is **carry on the next day**. It comes back, and it sticks.

> **Sparky's method**
>
> Talk the lesson through out loud as if teaching it to a class, for example **AC theory**. An evening walk is a good time for it. Teach the topic out loud, from your notes, to an imaginary class.

MAKE IT A PRIORITY

- This qualification is an investment. **Family** is your first priority and your **job** is second. Studying should be a **close third**, ahead of nights out, holidays and hobbies, as high as is reasonable.
- It's easy to think "it's all right for experienced electricians, it's their job to know it". But this is going to be **your** job too, whatever trade you're in. It's your job to **learn it, know it and apply it**.
- If you're doing it just for interest, you're welcome. There's no such thing as too much knowledge.
