# YOU FIND IT, THE INSTALLER FIXES IT

## YOU FIND CROSSED CONDUCTORS. DO YOU SWAP THEM?

When inspection or testing turns up a defect, the **installer** puts it right, and it is then inspected and tested again before the certificate is issued. Guidance Note 3 is explicit that making good defects is not the job of whoever is carrying out the inspection and testing.

> **On site**
> , swapping two conductors yourself takes a minute, and plenty of electricians would. **In an exam**, answer from the book: the inspector reports it, the installer fixes it, and the certificate waits until it’s done.

**Guidance Note 3** · 2.6.2 · defects made good by the installer
